

NORTH SAN JOAQUIN WATER CONSERVATION DISTRICT

What is the Strategic Plan?

The proposed Strategic Plan contains 7 goals, 16 objectives, and 75 actions to sustainably manage water in the District to benefit the local environment, community, and economy.

Why is the Strategic Plan important?

The 2014 Sustainable Groundwater Management Act requires landowners in critically overdrafted groundwater basins to reduce groundwater use. Failure to achieve change will result in:

- **State intervention** in local groundwater management
- **State fees** on groundwater usage
- Groundwater **pumping restrictions**
- Potential Mokelumne River surface **water right loss**

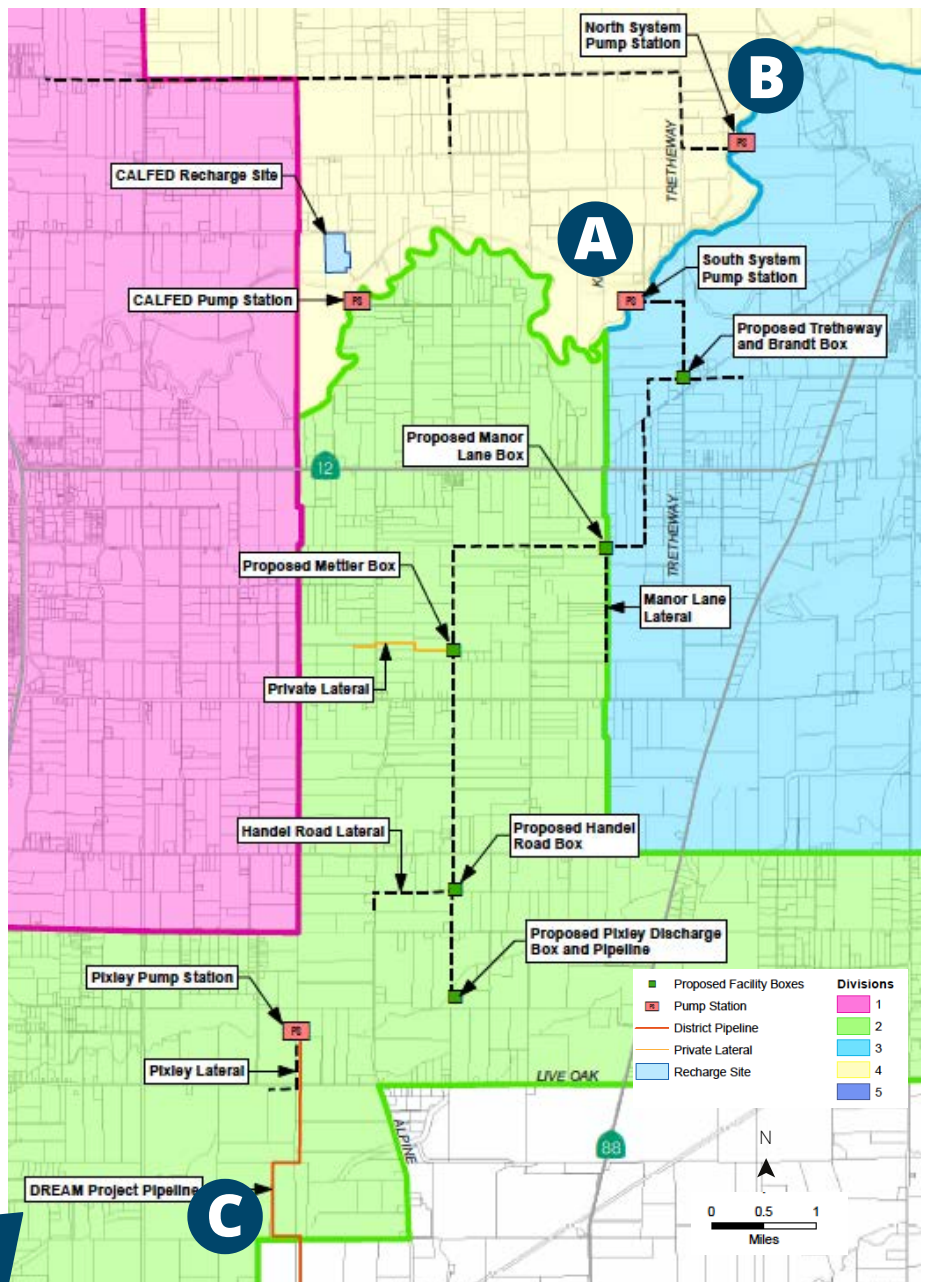

Proposed Strategic Plan goals

1. Ensure District fiscal sustainability
2. Plan, design and improve facilities to use surface water
3. Sustainably manage groundwater to maintain local control
4. Increase the total water supply available
5. Protect the Mokelumne River water right
6. Develop a sustainable District governance and staffing structure
7. Improve District communication and transparency

If funded, proposed infrastructure improvements will:

- A** Achieve full operability of the south surface water delivery system
- B** Achieve full operability of the north surface water delivery system
- C** Complete the groundwater recharge, banking, and recovery DREAM pilot project
- D** Build additional direct groundwater recharge facilities (location to be determined)

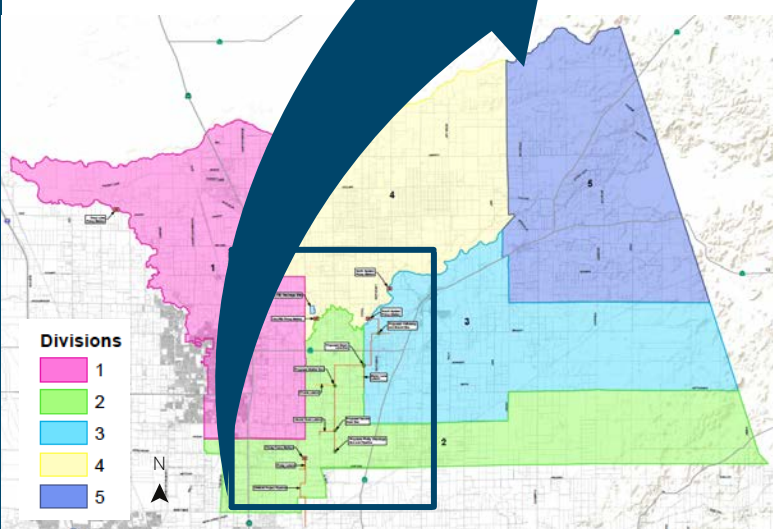

Proposed project areas

Divisions

1	David Simpson
2	Tom Flinn
3	Joe Valente
4	Charles Starr
5	Marden Wilber

Proposed Facility Boxes	█	Divisions	█
Pump Station	⊠	1	█
District Pipeline	—	2	█
Private Lateral	—	3	█
Recharge Site	■	4	█
		5	█

We want to hear from you!

Opportunities to engage:

- Provide comments on the proposed Strategic Plan
- Participate in public meetings
- Help seek feedback from other landowners
